Tahsin Mert Ulu

LinkedIn | +905076013281 | ulu@sabanciuniv.edu

Skills

• C# | Python | Java | JavaScript | SQL | C++ | Django | React | MongoDB | Android Studio | Jira | Bitbucket | Atlassian | Artificial Intelligence |
• Unit Testing | Frontend | Backend | Data Analysis | Scrum | Full-Stack | Git | ML | Turkish (Native) | English (Advanced) | German (Beginner) |
• Unity | Object-Oriented Programming | Debugging | Problem Solving | Gameplay Systems | Grid-Based Mechanics | Level System Design | Procedural Level Generation | Animation Integration | Unity Editor Tools |

Experience

Software Development Intern Yapı Kredi Teknoloji Istanbul, Turkey 02/2025 - 01/2026

• Developed software for a full-stack banking application used by internal teams, with emphasis on efficiency and secure workflows.
• Implemented React-based frontend flows and supported backend integration to improve internal banking operations.
• Developed backend and BFF layers with Java and Spring Boot, and managed PostgreSQL-based data access.

Software Development Intern Asis Elektronik ve Bilişim Sistemleri Istanbul, Turkey 02/2024 - 04/2024

• Developed a mobile application for real-time bus tracking and card balance inquiry.
• Integrated the TFE Open Data API to provide real-time route information.
• Applied MVVM architecture to support maintainability, debugging, and code efficiency.

Education

Bachelor's Degree Sabancı University Istanbul, Turkey 09/2020 - 06/2025
• Major in Computer Science and Engineering GPA:3.01
• Minor in Decision and Behavior

One Term Exchange Program Technische Universitat Hamburg Istanbul, Turkey 03/2024 - 09/2024

Highschool Diploma Adana Gündoğdu College Science High School Adana, Turkey 09/2016 - 06/2020

Projects

• Unity Puzzle Game Prototype – (Game Development Project) 09/2024 - 01/2025
• Developed a casual puzzle-game prototype in Unity with C#, focusing on interactive gameplay systems.
• Designed a grid-based mechanic for object interaction and reusable level structures.
• Implemented animation-supported gameplay feedback and logic for responsive player interaction.

• Procedural Level System for Puzzle Gameplay – (Game Systems Project) 09/2024 - 06/2025
• Built systems capable of dynamically generating levels for replayable puzzle experiences.
• Designed level logic with a focus on maintainable game architecture and reusable components.
• Strengthened object-oriented problem-solving through gameplay-system implementation in Unity.

• Mobile Transportation Tracking Application – (Android Studio) 02/2024 - 04/2024
• Developed a mobile app for real time bus tracking and card balance inquiry during my internship at Asis Elektronik ve Bilişim Sistemleri A.Ş.
• Integrated the TFE Open Data API to provide users with live bus locations and route information.
• Followed MVVM architecture to ensure clean, maintainable, and scalable code.

• Word Puzzle Game Prototype – (Unity / C#) 09/2023 - 01/2024
• Developed a word puzzle game prototype inspired by Words of Wonders-style mechanics.
• Implemented letter selection, word validation, and progression-oriented gameplay logic.
• Focused on recreating interaction patterns and core gameplay systems through reverse-engineering.

• Match-Style Game Prototype – (Unity / C#) 09/2023 - 01/2024
• Built a match-style casual game prototype inspired by Candy Crush-like grid interactions.
• Implemented tile-matching mechanics, gameplay loops, and state management.
• Explored mobile puzzle-game design patterns through rapid prototyping in Unity.

Volunteer Work

• Civic Involvement Projects February - June 2021
• Produced a podcast series on the Mucilage problem affecting semi-enclosed seas such as Marmara Sea.

Activities

• Member, SUGastro (Sabanci University Gastronomy club) 2021 - 2024
• Karate 2009 - 2013
• Basketball, Adana Gündoğdu College Basketball Team player 2011 - 2013
• Tennis, Adana Tennis Dağcılık Sport Club 2013 - 2017
